

# What are You Doing to Help Prevent Heart Disease?

Colostrum products from Immune Tree contain a significant quantity of IGF-1—an amount substantially greater than that found in other products.\*

\*Substantiated by laboratory tests conducted at the Endocrinology Diagnostic Laboratory by Dr. Donald Lein, Professor Emeritus Cornell University.

These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure or prevent any disease.

**Replenish your heart with the life-giving components found in high-quality, first-milking colostrum products from Immune Tree.**

Complete first-milking bovine colostrum collected within 0-6 hours only after birth of the calf, which is the basis of all products sold by Immune Tree, is an excellent resource for both human growth hormone (HGH) and insulin-like growth factor-1 (IGF-1). HGH and IGF-1 work together in the functioning and repair of the heart muscle. With age, naturally occurring levels of HGH and IGF-1 decrease. Rejuvenating the body's level of these growth factors can help maintain strong cardiovascular function and reverse damage done by the natural aging process.
